***Election/Restrictions***

1. Claim 1 is allowable. The restriction requirement between the species of oxirane polymers, as set forth in the Office action mailed on 06/30/2006, has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.** Claim 9, directed to a species of oxirane polymer, is no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim.

In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

**EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Andrew A. DeMaster on 10/26/06.

The application has been amended as follows:

**IN THE CLAIMS**

In claim 36, line 8, after "combining" insert "and reacting".

In claim 40, in the second to the last line of the claim, delete "ration" and substitute thereof --ratio--.

3. The following is an examiner's statement of reasons for allowance: Prior art such as Chu et al. teach reacting a polymer containing carboxyl groups with a non-vinyl condensation polymer. Other prior art such as Hart et al. teach blending epoxy resins and acid-functional resins to form two-component unreacted blend of the two resins, but do not teach reaction the two resins and subsequently dispersing them in water. Further prior art, such as Wilfinger et al., teach reacting a polycarboxylic component and an epoxide-group-containing polyhydric component and subsequently adding a neutralizer such as tertiary amine.

None of the prior art was found to teach or sufficiently suggest a process comprising combining an oxirane-functional vinyl addition polymer, having an oxirane functionality of 0.5 to 5, with an acid-functional polymer having, an acid number of 30 to 500, and reacting the oxirane-functional vinyl addition polymer and the acid-functional

polymer together in the presence of a tertiary amine to form a water-dispersible polymer, and subsequently dispersing the water-dispersible polymer in a water carrier.

Thus, claims 1-27, 36, 37 and 40 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
